### **Phase Transformations in Alloys Industrial Metallurgists**

The type of transformation that can occur depends on the specific alloy. Not all types of transformations occur in all alloys, and in some alloys no transformations are possible, other than the solid-liquid transformation. Two of the most common phase transformations encountered with common alloys are eutectoid and precipitation. For both types of transformation, the transformation involves the movement of atoms through the metal to rearrange themselves to form the new phase or phases.
